SECTION A

INTRODUCTION TO OPENTYPE®

WHAT IS OPENTYPE?

OpenType® is a cross-platform font file format developed jointly by Adobe and Microsoft. The two main benefits of the OpenType format are its cross-platform compatibility (the same font file works on Macintosh and Windows computers), and its ability to support widely expanded character sets and layout features, which provide rich linguistic support and advanced typographic control.

OpenType fonts can be installed and used alongside PostScript® Type 1 and TrueType fonts.

The range of supported layout features may differ in the various FontFont OpenType packages, therefore each OpenType package will be accompanied by this FF Info Guide listing the layout features supported by this specific font package.

You'll find a glossary of all available OpenType layout features in Section B of the general FF OpenType User Guide.

Please see the FontFont OpenType® User Guide
at <http://www.fontfont.com/opentype>

ABOUT FF NUVO REGULAR

During a stay in Paris, French magazines with their elegant, extravagant appearance inspired Siegfried Rückel for this typeface. He wanted to design a kind of rounded typeface without using the common methods. So, he took advantage from the visual limitations of our eyes: the stroke endings appear soft when seen from a distance or in small point sizes but reveal their peculiar forms at a closer look. It's a contemporary type design with vertical contrast, and especially the characters a, g and y show the calligraphic touch. Alternate characters, for example a, g, k, s, y, add typographic versatility. Siegfried is sure that it's a very suitable typeface for magazine design from headlines to longer texts as well as for advertising, packaging, corporate design,....

Since 2011, a monospaced variant for all weights, including Small Caps and Italics offers new options for traditional and unusual designs. The slightly lower x-height in comparison to FF Nuvo emphasizes FF Nuvo Mono's typewriter character.

ABOUT SIEGFRIED RÜCKEL

Siegfried Rückel lives in Berlin and works as a freelance designer. He studied design at the University of Applied Science in Potsdam under Lucas de Groot and Lex Drewinski. After releasing a number of "fun" faces he started his first earnest type project, FF Alega, followed by the magazine typeface FF Nuvo in 2008.
